

STANDARD HASP BAR LOCK

The standard locking option for Summit Phenolic Lockers is a through door mounted 11 gauge stainless steel hasp bar for end-user supplied padlocks. The hasp bar is secured to the locker side panels using theft proof stainless steel fasteners and protrudes through the door for ultimate security.

On the front of the door we provide a reverse side engraved plastic ID tag and door pull. The ID tag is reverse side engraved with ½” tall numbers so that the numbers will not deteriorate or collect dirt. The tag also provides protection from the padlock hitting the door.

ALTERNATIVE LOCKING MECHANISMS AND ID TAGS/DOOR PULLS ARE AVAILABLE UPON REQUEST
